

## English Self-introduction

Good morning, dear professors. It's great honor to be here for the interview. First of all, I'd like to introduce myself to you. My name is XXX. I'm 21 years old. And I was born in a small town of Anhui province. I am a senior student of the College of Mechanical and Electrical Engineering of Central South University. My major is Mechatronic Engineering. I consider myself as a hard working and determined person with a strong sense of responsibility and broad horizons. Moreover, I am always willing to achieve higher goals, and seek for a challenging life. Over the last three years, I was mainly concentrating on obtaining knowledge. Not only from books, but also from social activities and countless others. When I was junior, I took part in The Second National Undergraduate Engineering Training Integration Ability Competition of Hunan province. Although our team was overlooked at the beginning, we finally proved ourselves through the unremitting striving. In the end, I led our team got the first prize of Hunan province. In my opinion, that experience is the most precious asset of my college life. Because it taught me that success belongs to the persevering.

Although I have broad interests in many aspects and grasp the essential knowledge of the major, but I think at present, I can do many things in a superficial level, but not be competent to do things professionally owing to lack of ample knowledge and ability. So I think further study is still urgent for me to realize self-value. Here I aspire to pursue doctor degree in the Department of Mechanical Engineering at Zhejiang University. In fact, this my only goal in the past 3 years. Today, Zhejiang University give me the chance to be here to fighting for my dream. If my hard working in the past years can won your affirmation, and if the present teachers would like to offer me the chance to continue my further study and research in my favorite field in Zhejiang University, I will definitely be grateful, and I will spare no effort in my further study and research to be distinguished. OK, that's all. Thank you very much!
